

Nasam × InspireU — the 3-minute pitch plan

Built from the challenge brief's 8 scored topics, live platform data, and a research pass over the InspireU program, stc Group units, and the Saudi market.

Companion files on branch [claude/stc-final-pitch-deck-0fo3yu](#).

2 coaching sessions left

The three headline moves

1 · Your traction slide undersells you. The deck says SAR 1.63M GMV and 300K in July. Live data: SAR 1.96M trailing-365-days, July at 569K, and August at 883K in just 19 days. Update every number.

2 · Two market claims are publicly indefensible. "29% of retail" is really ~10% (a better story — more room to grow), and "<20,000 sellers" conflicts with Amazon's own 40K target. Fix both before judging day — the Bahrain final's jury included the Jahez CEO. These rooms know the numbers.

3 · The stc slide is the centerpiece. The 22-page profile has no answer to "what do we add to stc / what does stc add to us" — and pillar 08 is literally titled "*why you, and why InspireU*." The two answers on page 2 are specific and named.

The numbers to put on stage

Pulled from production on 19 Aug 2026. August is a partial month — say "first 19 days" out loud; it sounds stronger and it's honest.

SAR 1.96M

GMV, trailing 365 days

4×

last 90 days vs the prior nine months combined

15,594

confirmed orders lifetime

495 → 822K

Sonbol (سنبل) monthly GMV, June → August, in 60 days

12,382

active products · 12,586 listings

5

channels carrying live GMV (Salla, Amazon, Trendyol, noon, Jahez)

The 10 slides · 3:00

Label each slide with the brief's own topic names — judges work from the same list and tick boxes. Purple lines are what the judges' cards say they listen for.

0:00

01 VISION **Title + Vision & Mission**

"The operating layer for Saudi commerce — from onboarding to cashflow." Vision: when a Saudi brand sells anywhere, it runs through Nasam.

0:20

02 PROBLEM Told as a story

We lived it — 25+ brands, 5 dashboards, 50 checks a day. Marketplaces convert 3× better, yet 80K merchants never made the jump. The demand moved; the brands didn't.

Judges listen for: evidence the pain is real, current and expensive.

0:50

03 SOLUTION One screen, no tech depth

One dashboard replaces five + a team that acts on it. Only two tech lines survive: Brand Health (10 dimensions, daily) and AI access to live commerce data.

Judges listen for: a clear line from the problem to your specific approach.

1:10

04 MODEL The anchor slide

One sentence a judge can repeat (below) + the funnel with prices: SAR 449/mo → onboarding → management + % of GMV.

Judges listen for: who pays, for what, at what price, how often.

1:30

05 REVENUE Past 365 days + projection

One illustration: 12 monthly GMV bars + dotted projection bars with assumptions written under them. Keep invoiced revenue (SAR 250K+) visibly separate from GMV. Land the Sonbol beat here.

Judges listen for: numbers with assumptions attached — not a hockey stick.

1:55

06 MARKET One simple slide

TAM \$24.6B (12% CAGR) → SAM: enablement SaaS SAR 0.5B → 5B by 2030 (RedSeer) → SOM ~SAR 45M at 1%. Name the rivals: agencies, ChannelEngine, Pattern — and doing nothing.

Judges listen for: a market you have actually spoken to, and rivals you can name.

2:10

07 TEAM Chemistry, not CVs

One closed loop: Fahad builds it · Ibrahim brings brands in · Tarik makes them succeed. One learning beat: we let go of the small brands — our machine wins on brands ready to scale.

Judges listen for: why this team, specifically, wins this market.

2:20

08 SPECIAL The repeatable line

"Uber didn't own cars. We don't own brands — we run the rails every Saudi brand rides to every marketplace." Then: you saw the rails work — Sonbol.

Judges listen for: the one line a judge repeats to another judge afterwards.

2:35

STC stc × Nasam — why we need each other

The two mandatory answers, specific and named — page 2. This is the slide the room remembers.

2:55

CLOSE The road

This year → 5 years in one visual. "Powering every seller's growth — with stc."

The business-model sentence

The team's call: this is the judges' #1 decision factor. If a judge cannot repeat it back, it isn't clear enough yet.

"Brands pay us monthly for the platform — and as they grow, they hand us more of the operation, until we run everything and earn a percentage of every riyal they sell."

Why it scales: land-and-expand is built into the funnel · revenue is GMV-linked (Sonbol is the live proof) · every manual service becomes a platform feature · unlockable later: ads %, seller financing, data, AI seats.

THE CENTERPIECE

stc × Nasam — the two answers

InspireU's stated mandate is "creating value for stc by linking startups into the stc ecosystem." This slide answers the exam question in their own language.

What Nasam adds to stc Group

1. **A new SME revenue line.** Vodafone runs 13 telco SaaS marketplaces; e& bundles commerce tools. Through solutions by stc, stc becomes the first GCC telco with a marketplace-commerce offer — DARE's "Expand" pillar.
2. **Data stc Bank can't see.** 200K+ registered merchants, SME lending rolling out — and no view of marketplace sales. Nasam holds the verified cross-channel revenue data that underwrites merchant working capital.
3. **The missing portfolio piece.** stc backed Rewaa (offline retail SaaS) and Zid (webstores, InspireU alum). Nasam is the third layer: marketplaces. Together — the full Saudi retail stack.

What stc adds to Nasam

1. **Distribution we can't buy.** A co-sell pilot through solutions by stc / stc Business SME customers and stc Bank's merchant base — the first [500] merchants in 2027.
2. **The fintech rails.** stc Bank partnership: merchant payouts + the Kingdom's first marketplace-data-underwritten working-capital product, piloted on our live brands. (The 11th batch's fintech track produced real commercial agreements — we're asking for that path.)
3. **Capital + credibility, on a named path.** SAR 100K equity-free grant + ~SAR 600K services now; tali ventures follow-on up to \$500K as we scale; the stc name behind us with enterprise brands.

Held for Q&A: sirar security certification · stc cloud / center3 data residency (PDPL) · iot squared logistics telemetry. And if a food-delivery judge is in the room (Jahez's CEO judged the Bahrain final): "we run brands on Jahez and HungerStation alongside Amazon and noon — nobody else does."

Fix these numbers before judging day

DECK CLAIM	VERDICT	USE INSTEAD
KSA e-commerce \$24.58B	Confirmed	Keep (~\$24.67B, Renub 2024; SAMA mada corroborates)
CAGR >12%	Confirmed	Keep
"29% of retail share"	Wrong	"~10% of retail today, heading past 25% — the shift is early" (a better story)
78,000+ storefront merchants	Confirmed	Keep — or "80,000+"
"Under 20,000 marketplace sellers"	Unverifiable	"Active local sellers are a small fraction of the 40,000+ registered e-commerce businesses"
Trendyol SA 915M → 1.35B → 1.67B	No public source	Label "internal estimate" — or "Trendyol passed \$1B Gulf GMV in year one, KSA its largest market"

The full script — word for word (~445 words · rehearse to 2:45)

0:00 · TITLE + VISION & MISSION We're Nasam — the operating layer for Saudi commerce. We take brands live on every sales channel and run them — from onboarding to cashflow. Our mission: one platform, every channel, for every Saudi brand. Our vision: when a Saudi brand sells anywhere — it runs through Nasam.
0:20 · THE PROBLEM We didn't find this problem in a report — we lived it, running twenty-five brands for ten companies. Every morning: five dashboards, fifty checks. A coffee brand winning on Salla, invisible on Amazon — same products, different rules. Saudi shoppers moved to the marketplaces — they convert three times better than a brand's own store. Eighty thousand merchants never made the jump. The demand moved. The brands didn't.
0:50 · OUR SOLUTION So we built the bridge ourselves. One screen replaces five dashboards — products, orders, inventory, profit — across Amazon, noon, Trendyol, Salla, Jahez — with a team that acts on it. Two things nobody else has: Brand Health, ten dimensions graded daily — and AI access to your live commerce data.
1:10 · BUSINESS MODEL The model in one sentence: brands pay us monthly for the platform — and as they grow, they hand us more of the operation, until we run everything and earn a percentage of every riyal they sell. Recurring — and it compounds with our brands' growth.
1:30 · REVENUE & GROWTH Is it working? The past twelve months: two million riyals of GMV — and the last ninety days did four times the nine months before them. One brand — Sonbol: four hundred ninety-five riyals in June; eight hundred twenty-two thousand in nineteen days of August. Our three-year projection: assumptions attached, no hockey stick.
1:55 · MARKET & COMPETITION The market: twenty-five billion dollars of Saudi e-commerce, growing twelve percent a year, forty thousand registered online businesses. Our rivals are real — agencies, ChannelEngine, Pattern — and the biggest: doing nothing. Nobody else is software AND operations, every channel.

2:10 · FOUNDERS & TEAM

Three founders, one closed loop: Fahad builds it, Ibrahim brings brands in, Tarik makes them succeed. Letting go of our smallest brands taught us where we win: brands ready to scale.

2:20 · WHAT MAKES US SPECIAL

Are we the next Uber? Uber didn't own cars. We don't own brands — we run the rails every Saudi brand rides to every marketplace. And you saw the rails work — Sonbol.

2:35 · STC × NASAM

So why InspireU — specifically? One: our merchants are your customers — bundle Nasam through solutions by stc: the Gulf's first telco commerce offer. Two: stc Bank is rolling out merchant lending; we hold what it can't see — verified marketplace sales data. stc Bank IS the cashflow. Three: you backed Rewaa for retail and Zid for webstores — Nasam is the marketplaces.

2:55 · CLOSE

This year: [target]. In five years: the commerce infrastructure of the Gulf — with stc. Thank you.

The next 48 hours

From the brief's own closing card: "the teams that treat the coaching sessions as real pitches are visibly different by judging day."

- 1 **Coaching session 1 — pitch badly, on purpose.** Full script, full timer, as if it's judging day. Mistakes belong here, not in front of the jury.
- 2 **Ask for the hard feedback, explicitly.** "Tear apart our business-model sentence and our stc slide — which claim would a judge attack?"
- 3 **Rehearse against a clock — out loud, standing, every time.** Timing is the most common reason teams lose points. Target 2:45.
- 4 **Fill every [EDIT ME]:** projection numbers, the coffee-brand anecdote, the one-liner choice, and the answer for SONDOS's August dip before a judge finds it.
